

# Automated Compliance Management

## IT compliance at your fingertips

### Automating Compliance Management

Configure Consulting can help your organization harness the power of the UCMDB to support critical compliance and configuration management processes. Using the HP UCMDB-Configuration Manager add-on\* our team has empowered clients to establish, manage and enforce standards across security, business continuity and compliance including:

- Baseline infrastructure standards
- Network management policies
- Data center operational guidelines
- Critical applications
- High availability requirements
- Geographic redundancy
- Security policies

\* Base Configuration Manager software is generally available to existing UCMDB users at no extra cost.

### Key Benefits

- Single-pane of glass for configuration, compliance and security policies
- Automated detection of policy breaches through DDMa/UCMDB discovery patterns
- Automated notifications via e-mail, incident tickets and other workflows
- Streamline existing configurations in the environment to reduce costs and mitigate risks

### Time to Value - How can Configure Consulting help

30-Day Quick-Start package:

- Deploy Configuration Manager
- Policy management dashboard
- Configure 5 policies within CM
- Perform environmental scans across 5 different CI types
